

Job Description

Junior .Net Developer

WellDatabase

We are seeking a talented and motivated Junior C# Data Programmer with expertise in SQL, data models, and web scraping to join our Data Team as WellDatabase. As a member of our data engineering division, you'll build solutions using .Net core. You'll write clean, functional code and be involved in the entire lifecycle including design, development, deployment, and maintenance of new and existing features. Ultimately, your work will impact the quality of our products in a meaningful way and you will be an integral part of our data team.

We are looking for an individual who possesses the following skillsets:

- Experience with .Net core (1-2 years)
- Proven experience as a C# developer, with a strong understanding of OOP concepts.
- Proficiency in SQL, with experience in writing complex queries and stored procedures.
- Familiarity with data modeling and database design principles.
- Hands-on experience with web scraping techniques and tools.
- Knowledge of data integration and ETL processes.
- Strong analytical and problem-solving skills, with a keen eye for detail.
- Excellent communication and teamwork abilities.
- Ability to work independently and take ownership of assigned tasks.
- Adaptability and willingness to learn new technologies and methodologies.

WellDatabase is an oil and gas software and data provider. We are bringing the latest web and mobile technologies to the oil and gas world. We gather public oil and gas data and normalize it into a single searchable database. This enables us to provide an interface that has no boundaries. No choosing states or query types, just one simple search to get you the data you need.

Our latest release brings significant additions to our analytics, advanced filtering options and fully customizable dashboards, offering a better way for oil and gas professionals to gain insight into publicly reported data. Users have the ability to analyze enormous amounts of data in seconds, all in an easy-to-use interface.
